Pasos para habilitar dispositivos BT:

https://www.sigmdel.ca/michel/ha/rpi/bluetooth_01_en.html

1) Para que la RPI no pueda acceder a la SIM de un telefono paired, editar la siguiente línea de

/lib/systemd/system/bluetooth.service
ExecStart=/usr/lib/bluetooth/bluetoothd --noplugin=sap

2) Añadir el usuario al grupo bluetooth
sudo adduser usuario bluetooth

3) Emparejar (pair), conectar (connect) y confiar (trust) en nuestro dispositivo.

```
$ bluetoothctl
[NEW] Controller 00:1A:7D:DA:71:13 rpi2fir [default]
[NEW] Device 54:E4:3A:1E:FC:92 iPhone
[bluetooth]# agent on
Agent registered
[bluetooth]# scan on
Discovery started
[CHG] Controller 00:1A:7D:DA:71:13 Discovering: yes
[CHG] Device 54:E4:3A:1E:FC:92 RSSI: -43
```

```
[bluetooth]# pair 54:E4:3A:1E:FC:92            ← Emparejar
Attempting to pair with 54:E4:3A:1E:FC:92
Failed to pair: org.bluez.Error.AlreadyExists  ← Ya lo habíamos
emparejado ;-)
[bluetooth]# connect 54:E4:3A:1E:FC:92
Attempting to connect to 54:E4:3A:1E:FC:92     ← Conectar tb en el
teléfono
[CHG] Device 54:E4:3A:1E:FC:92 Connected: yes
[iPhone]# trust 54:E4:3A:1E:FC:92              ← Confiar
Changing 54:E4:3A:1E:FC:92 trust succeeded
[iPhone]# quit
Agent unregistered
[DEL] Controller 00:1A:7D:DA:71:13 rpi2fir [default]
$
```

BlueALSA (formerly know as BluezALSA)

https://github.com/Arkq/bluez-alsa

https://forum.armbian.com/topic/6480-bluealsa-bluetooth-audio-using-alsa-not-pulseaudio/

Se supone que tenemos BlueALSA as background task:
bluealsa --disable-hfp &

Se entiende que el 'usuario' pertenece al grupo 'audio'

Final Note: Bluealsa and PulseAudio do not play well together. You will have to completely uninstall PulseAudio and all its baggage in order to use bluealsa. O por lo menos Bluetooth support has to be disabled in the PulseAudio, any Bluetooth related module has to be unloaded.

Note: Given your bluetooth device is a virtual device, it will not be listed when you run aplay -l or similar listing commands.

Comandos Bluetooth:

$ echo help | bluetoothctl

```
[bluetooth]# help
Available commands:
  list                       List available controllers
  show [ctrl]                Controller information
  select <ctrl>              Select default controller
  devices                    List available devices
  paired-devices             List paired devices
  power <on/off>             Set controller power
  pairable <on/off>          Set controller pairable mode
  discoverable <on/off>      Set controller discoverable mode
  agent <on/off/capability>  Enable/disable agent with given capability
  default-agent              Set agent as the default one
  advertise <on/off/type>    Enable/disable advertising with given type
  set-advertise-uuids [uuid1 uuid2 ...] Set advertise uuids
```

```
  set-advertise-service [uuid][data=[xx xx ...] Set advertise service
data
  set-advertise-manufacturer [id][data=[xx xx ...] Set advertise
manufacturer data
  set-advertise-tx-power <on/off> Enable/disable TX power to be
advertised
  set-scan-filter-uuids [uuid1 uuid2 ...] Set scan filter uuids
  set-scan-filter-rssi [rssi] Set scan filter rssi, and clears pathloss
  set-scan-filter-pathloss [pathloss] Set scan filter pathloss, and
clears rssi
  set-scan-filter-transport [transport] Set scan filter transport
  set-scan-filter-clear      Clears discovery filter.
  scan <on/off>              Scan for devices
  info [dev]                 Device information
  pair [dev]                 Pair with device
  trust [dev]                Trust device
  untrust [dev]              Untrust device
  block [dev]                Block device
  unblock [dev]              Unblock device
  remove <dev>               Remove device
  connect <dev>              Connect device
  disconnect [dev]           Disconnect device
  list-attributes [dev]      List attributes
  set-alias <alias>          Set device alias
  select-attribute <attribute> Select attribute
  attribute-info [attribute] Select attribute
  read                       Read attribute value
  write <data=[xx xx ...]>   Write attribute value
  notify <on/off>            Notify attribute value
  register-profile <UUID ...> Register profile to connect
  unregister-profile         Unregister profile
  version                    Display version
  quit                       Quit program
```

$ hcitool

```
hcitool - HCI Tool ver 5.43
Usage:
      hcitool [options] <command> [command parameters]
Options:
      --help     Display help
      -i dev     HCI device
Commands:
      dev   Display local devices
      inq   Inquire remote devices
      scan  Scan for remote devices
      name  Get name from remote device
      info  Get information from remote device
      spinq Start periodic inquiry
      epinq Exit periodic inquiry
      cmd   Submit arbitrary HCI commands
      con   Display active connections
      cc    Create connection to remote device
      dc    Disconnect from remote device
      sr    Switch master/slave role
      cpt   Change connection packet type
```

```
      rssi  Display connection RSSI
      lq    Display link quality
      tpl   Display transmit power level
      afh   Display AFH channel map
      lp    Set/display link policy settings
      lst   Set/display link supervision timeout
      auth  Request authentication
      enc   Set connection encryption
      key   Change connection link key
      clkoff     Read clock offset
      clock Read local or remote clock
      lescan     Start LE scan
      leinfo     Get LE remote information
      lewladd    Add device to LE White List
      lewlrm     Remove device from LE White List
      lewlsz     Read size of LE White List
      lewlclr    Clear LE White List
      lerladd    Add device to LE Resolving List
      lerlrm     Remove device from LE Resolving List
      lerlclr    Clear LE Resolving List
      lerlsz     Read size of LE Resolving List
      lerlon     Enable LE Address Resolution
      lerloff    Disable LE Address Resolution
      lecc  Create a LE Connection
      ledc  Disconnect a LE Connection
      lecup LE Connection Update

For more information on the usage of each command use:
      hcitool <command> --help
```

$ hcitool con

```
Connections:
      > ACL 54:E4:3A:1E:FC:92 handle 70 state 1 lm SLAVE AUTH ENCRYPT
```

--- PAIRING a BT Device:

```
bluetoothctl >
    scan on
    [NEW] Device 30:23:23:F4:48:2C TH-S10U
    scan off
    pair 30:23:23:F4:48:2C
    trust 30:23:23:F4:48:2C
    exit

After that power off&on the bt-device and the device will connect
automatically as a trusted device.

Before we try our first audio-command we had to export one thing to make
BlueALSA mor system-friendly:
export LIBASOUND_THREAD_SAFE=0
```

--- PLAYING Text to speech:

```
speak "Hello, how are you?" -w /home/guido/espeak.wav -s145
aplay -D bluealsa:HCI=hci0,DEV=30:23:23:F4:48:2C,PROFILE=a2dp
/home/guido/espeak.wav
```

--- PLAYING Internetradio:

```
mpg123 -a bluealsa:HCI=hci0,DEV=30:23:23:F4:48:2C,PROFILE=a2dp -@
/home/guido/ffh80s.pls
```

--- ASOUNDRC for PLAYING

~/.asoundrc with the following content:

```
    defaults.bluealsa.interface "hci0"
    defaults.bluealsa.device "30:23:23:F4:48:2C"
    defaults.bluealsa.profile "a2dp"
    defaults.bluealsa.delay 10000
```

Then:

```
mpg123 -a bluealsa -@ /home/guido/ffh80s.pls
```

--- VOLUME

For set the volume of such a device you have to know the "real" name of the device out of the bluetoothctl and the name of the used protocol:

```
    Device: 30:23:23:F4:48:2C TH-S10U
    Protocol: A2DP
amixer -D bluealsa sset 'TH-S10U - A2DP ' 70%
```

--- Ver los devices BT

```
$ echo -e "devices\nquit" | bluetoothctl
[NEW] Controller 00:1A:7D:DA:71:13 wpi [default]
[NEW] Device 54:E4:3A:1E:FC:92 iPhone
[bluetooth]# devices
Device 54:E4:3A:1E:FC:92 iPhone
[bluetooth]# quit
[DEL] Controller 00:1A:7D:DA:71:13 wpi [default]
```

--- AUTOCONNECT

After starting bluealsa and then a moment later the BT-device will auto-connect if trusted:

```
    Device 30:21:8E:AA:4C:45 ML-28U
    Device 30:23:23:F4:48:2C TH-S10U
```

```
    Device 00:11:67:3F:9B:18 BTLS9001
```

If you didnt want to auto-connect or it wouldnt autoconnect you can connect to a paired&trusted BT-Speaker with the command:

```
echo -e "connect 00:11:67:3F:9B:18\nquit" | bluetoothctl
```

Disconnect is the same:

```
echo -e "disconnect 00:11:67:3F:9B:18\nquit" | bluetoothctl
```

You could also change the commandline here for pairing or trusting a device like

```
echo -e "pair 00:11:67:3F:9B:18\trust 00:11:67:3F:9B:18\nquit" | bluetoothctl
```

--- CAPTURING

To capture audio from the connected Bluetooth device:

```
$ arecord -D bluealsa capture.wav
$ arecord -D bluealsa:HCI=hci0,DEV=XX:XX:XX:XX:XX:XX,PROFILE=sco test.wav

$ arecord -D bluealsa:HCI=hci0,DEV=54:E4:3A:1E:FC:92 -r44100 -c2 | aplay -D jack &
```

Nótese que arecord y aplay harán resampling automático salvo que se inhiba.

--- PARA VER SI UN DEVICE ESTÁ CONECTADO

```
$ echo -e "paired-devices\nquit" | bluetoothctl
[NEW] Controller 00:1A:7D:DA:71:13 wpi [default]
[NEW] Device 54:E4:3A:1E:FC:92 iPhone
[bluetooth]# paired-devices
Device 54:E4:3A:1E:FC:92 iPhone
[bluetooth]# quit
[DEL] Controller 00:1A:7D:DA:71:13 wpi [default]
$

$ echo -e "info 54:E4:3A:1E:FC:92\nquit" | bluetoothctl
[NEW] Controller 00:1A:7D:DA:71:13 wpi [default]
[NEW] Device 54:E4:3A:1E:FC:92 iPhone
[bluetooth]# info 54:E4:3A:1E:FC:92
Device 54:E4:3A:1E:FC:92
        Name: iPhone
        Alias: iPhone
```
